

Maintenance Awareness for Manufacturing Machine Operators

This 40 hour training is for operators who are responsible for performing machinery cleaning, lubricating, inspecting, adjusting and participating in equipment reliability improvement teams. In customized training programs, company specific information may be used to supplement learning events.

Instructional Topics:

- Perform preventive maintenance and routine repair.
 - ✓ Bearings and Couplings
 - ✓ Belts and Chain Drives
 - ✓ Fasteners
 - ✓ Tool selection and usage
- Monitor indicators to ensure correct operations.
 - ✓ Proactive maintenance practices
 - ✓ Correlation of machinery conditions and product quality
- Recognize potential maintenance reliability issues with production systems, including knowledge of when to inform maintenance personnel about problems with:
 - ✓ Pneumatic Systems
 - ✓ Hydraulic Systems
 - ✓ Lubrication Processes
